Preface

1	Introduction	1
1.1	Why this Book	1
1.2	Target Audiences	2
2	The Rotation Method	3
2.1	When to Consider	3
2.2	Examples	3
2.3	Practice	8
3	Geometry Transformation	11
3.1	Rotation, Translation and Reflection	11
3.2	Examples	12
3.3	Compute Ellipse's Area	16
3.4	The Projection Method	18
3.5	Further Readings	20
3.6	Practice	21
4	The Area Method	23
4.1	Compute Triangle Area	23
4.2	Basic Patterns	26
4.3	Compute Same Area Differently	31
4.4	Practice	33
5	The Coordinates Method	41
5.1	When to Consider	41
5.2	Basic Formulas	42
5.3	Examples	44
5.4	Practice	48
6	The Trigonometry Method	51
6.1	Law of Sines and Cosines	51
6.2	Trigonometric Identities	52

CONTENTS

6.3	Examples	53
6.4	Practice	56
7	Application of Vectors	61
7.1	Basics	61
7.2	More Examples	73
7.3	Triangle Centers	76
7.4	Practice	77
8	Applying Principles in Physics	79
8.1	Employing Principles in Physics	79
8.2	The Center of Mass Method	80
8.3	System of Forces (Lami's Theorem)	85
8.4	Minimal Potential Energy	86
8.5	Practice	88
9	Solutions	91
9.1	Introduction	92
9.2	The Rotation Method	93
9.3	Geometry Transformation	103
9.4	The Area Method	109
9.5	The Coordinates Method	126
9.6	The Trigonometry Method	135
9.7	Application of Vectors	148
9.8	Applying Principles in Physics	155
